WHY WOOD PRESERVATION?

WHY WOOD PRESERVATION?

A) Natural wood changes colour due to the influence of UV light & weather conditions :

Greying in the weathering area

Education of "noses" due to roof edges or interaction with linseed oil

B) Natural wood becomes brittle due to erosion and is overgrown with algae and lichen :

Consequences:

- Changes to the colour and surface structure lead to a reduction in the value of the wooden object.
- Cleaning requires the use of environmentally harmful chemicals and is associated with high costs!

=> Preventive wood protection is essential!

693 WOOD PROTECTION

Painting and wood trade

WOOD PROTECTION NATURE

Impregnation
For natural wood indoors and outdoors

Transparent protection for
the preservation of the wood color

1 liter is sufficient for
up to 40 m²

Target areas:

- all types of natural wood
- Garden furniture
- Garden shed
- Wooden figures
- Privacy screen
- Terrace floors
- Fences

Properties:

- solvent-free
- hydrophobic
- dirt-repellent
- colorfast
- Protection against graying
- UV protection

Container sizes:

- 1 L bottle
- 5 L canister

Type of application

- with sprayer / low pressure pump spray
- Brush
