NOVEMBER 2026
SPECIAL
NEWSLETTER

Since 10 October 2026, new EU restrictions on PFHxA, its salts and PFHxA-related substances have been in effect. These restrictions affect, among other products, consumer waterproofing sprays and treatments, certain clothing items and footwear. From 10 October 2027, the restrictions will also apply to additional consumer textiles, including upholstery fabrics, carpets and curtains.

Manufacturers, distributors and brand owners now need to take action: Existing products should be reviewed for compliance with the new regulations and, where necessary, replaced with suitable alternatives in good time.

CCM offers four technology groups to address these requirements: PFAS-free coatings, fluorinated formulations with very low PFHxA levels, as well as C4 and C6 technologies.

Our goal: To provide the most suitable, high-performance textile coating for every application, while ensuring compliance with the regulations applicable in each target market.

1. PFAS-FREE – RELIABLE PROTECTION WITHOUT FLUOROCHEMICALS

CCM 7681 / 8685 / HB Industrial Technology

PFAS-free textile coatings provide reliable water repellency and protection against water-based stains – without the use of fluorinated substances. They are particularly suitable for applications where protection against water and moisture is the main priority.

Product Information 7681
Product Information 8685

Key benefits: Good to very good water repellency, PFAS-free technology and versatile applications.

Important: PFAS-free technologies generally do not achieve the same level of oil and grease repellency as fluorinated coatings.

2. LOW-PFHxA – FLUORINATED TEXTILE COATINGS WITH VERY LOW PFHxA LEVELS

CCM 695 / 697

These water-based textile coatings combine reliable water repellency with additional protection against oil and grease. Thanks to their very low PFHxA levels, they offer an alternative to conventional fluorinated textile coatings.

Product Information 695 / 697

Key benefits: Very good water repellency, additional oil and grease repellency, very low PFHxA levels and easy application.

Both products are available as concentrates and are suitable for a wide range of textile applications.

Important: Compliance with applicable PFHxA restrictions must be assessed individually, depending on the product, application and target market.

3. C4 TECHNOLOGY – HIGH-PERFORMANCE PROTECTION FOR DEMANDING APPLICATIONS

CCM 789 / 8689 / 9685 (Concentrate)

C4 technology provides very good water repellency combined with effective protection against oil, grease and stains. These coatings are particularly suitable for demanding textile applications where additional protection is required.

Product Information 789 / 8689 / 9685

Key benefits: Very good water repellency, effective oil and grease repellency, enhanced stain protection and availability as ready-to-use products and concentrates.

Important: The use of C4 technologies must be assessed in accordance with the applicable regulations in each target market and for the intended application.

4. C6 TECHNOLOGY – PROVEN HIGH-PERFORMANCE PROTECTION

CCM 689 / 7689 / 7685 (Concentrate) / 687

C6 technology offers proven high-performance protection with excellent water, oil and grease repellency. These coatings are particularly suitable for demanding professional and industrial textile applications where maximum protection is required.

Product Information 689 / 7689 / 7685 / 687

Key benefits: Excellent water repellency, strong oil and grease repellency, effective stain protection and proven performance in demanding applications.

Important: The use of C6 technologies is subject to regulatory restrictions. Compliance must be assessed individually, depending on the intended application and target market.

THE RIGHT TEXTILE COATING FOR YOUR APPLICATION

Whether PFAS-free, Low-PFHxA, C4 or C6 – CCM helps you select the right technology for your specific application. We are happy to advise you on our ready-to-use products, concentrates and private-label solutions.
