

# Cleaning a skate park with Biosativa®

September 2023

## Before

This well used Skatepark had to be cleaned prior to being sealed with a protective layer. The local council stressed that a completely environmentally friendly cleaner should be used.

## Cleaning with Diluted Biosativa®

Biosativa was spray applied at 1:20.  
The surface was then rinsed with a "light" pressure washer.

## The Results

The newly cleaned surface not only looks like new but cleaning with Biosativa® has resulted in the removal of oils and sugars, (from soft drinks). These contaminants must be removed in order to allow for optimum bonding conditions for the application of the protective layer.
