

7640 Car Body "Quartz Ceramic Coating"

Our "CCM 640 Quartz ceramic coating" has been established and known in the market for many years. We have now upgraded this coating. Our new variant is known as "7640".

7640 offers almost identical performance, but the solvent has been changed in order to allow for a longer working time. The coating can be applied, just like the 640 coating, but polishing (if necessary) can be conducted up to 20 minutes after application. This makes the application on cars, aircraft and boats much easier. All other important performance attributes are the same as for 640.

Zoom/Teams/Skype-Meeting?

If you have any questions about the products, please [contact us](#) and we can organize a **video meeting (Teams, Zoom, Skype)**.

Upgraded Car Coating Range

CCM has completely revised its range of high-quality car coatings, from "quick and easy" for DIY application for the consumer market to "super durable coatings" for professionals.

New Catalogue Liquid Glass Coatings

The new CCM Liquid Glass Catalogue is now [online](#).

We are introducing some new products, this year especially in the area of stone protection (new marble protection and penetrating stone protection, which is water, oil and stain proof).

CCM wins Innovation Award

The EU Business News Magazine has announced the winners of the **2020 German Business Awards** and we are proud to say that CCM has won the award, "Innovation Award in Nano Scale Liquid Glass Coating Technology 2020".

UPGRADED STONE COATING PENETRATIVE - ALSO OIL RESISTANT - UPGRADED

7620 Upgraded Stone coating penetrative

Our "620 penetrative stone protection" has been on the market for many years and is a highly sought after technology. It offers outstanding hydrophobicity in the most challenging environments. We have now upgraded this technology and added stain protection to the list of high performance characteristics.

The 7620 is solvent-based, but does not fall under the "dangerous goods for shipping" regulations.

The degree of penetration depends on the porosity of the subsurface. On concrete, the penetration can be up to 10 mm; on stones such as granite up to 1 mm. The coating becomes part of the structure of the stone so that long-term protection is guaranteed. Ideal for use on cement and natural stone when a "natural", non-glossy appearance is desired. Stain protection combined with exceptional durability. It is very easy to work with.
