

The “Glass” component of Liquid Glass

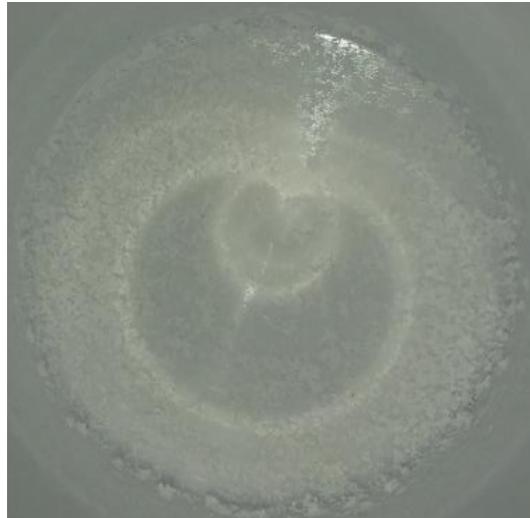

These images show the solid / precipitate component of some of our coatings

The images show the SiO₂ deposits which remain after 10ml of our coatings have been allowed to dry at room temperature. The micron scale coatings clearly contain more SiO₂ than the nano scale coatings. The coatings are either water or solvent based.

695 Universal for absorbent surfaces

675 Universal for non-absorbent surfaces

601 Glass/Ceramics
(standard quality, good glass layer)

7601 Glass/Ceramics
(best Quality, thicker glass layer)

640 Permanent Protector
Industrial Coating – a lot of pure glass

645 Protector XT-Ultra
As 640, but a different quality of glass
